

QUICK SOLUTION GUIDE

SEVERE STROKE IN 30 YEARS OLD
PATIENT

SCENARIO

#292

NAME

PATRICIA GENTRY

SPECIALTY

Neurology

DIFFICULTY LEVEL

INTERMEDIATE

SIMULATION ENVIRONMENT

INTRA HOSPITAL - EMERGENCY ROOM

Dialogues

Ask the following questions to the patient:

History Taking

Chief Complaint

- What happened to you?

History of Present Illness

- When did your symptoms start?

Medications and Allergies

- What medication have you been taking?

Physical examination

Perform the following physical examinations:

Breathing

- O2 Sat (%)

Circulation

- Blood pressure (mmHg)
- Heart rate (bpm)

Disability

- Blood glucose (mg/dL)

Exposure

- Temperature (°C)

Medical tests

Request the following medical tests:

Decision aids

- Stroke scale (NIHSS)

Imaging

- Cerebral angiography
- Head CT

Treatments

Administer the following treatments:

i.23

- Medications | Fibrinolytics | Alteplase

i.24

- Call | Thrombectomy by interv. neuroradiology

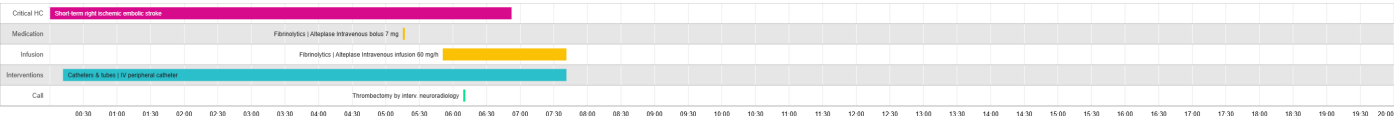

Baseline

Visualize the baseline approach. The baseline predicts scenario behavior assuming no actions by the trainee, which usually represents the worst-case scenario.

Optimal approach - International

Visualize the optimal approach to end your simulation successfully.

Assessment question(s) after simulation

Questions presented to the trainee in order to have a more detailed evaluation of the use of the clinical scenario.

Summative Multiple Choice Question:

Question

What is the most likely diagnosis?

Correct answer

Right hemisphere ischemic stroke

3 Incorrect answer(s)

Right hemisphere hemorrhage

Epileptic fit

Encephalitis

Handoff question

Question presented to the trainee to assess their ability to effectively communicate patient information during a transition of care. This question is optional.

Question

Summarize this Body Interact scenario using a structured handoff pattern.

Review handoff pattern

SBAR (Situation, Background, Assessment, Recommendation): Includes current condition and reason for handoff, relevant history and context, assessment details, and recommended actions.

SOAP (Subjective, Objective, Assessment, Plan): Covers patient-reported symptoms and history, measurable data and findings, clinical impressions and

diagnoses, and the treatment plan.

I-PASS (Illness Severity, Patient Summary, Action List, Situation Awareness and Contingency Planning, Synthesis by Receiver): Encompasses illness status, patient background, tasks and actions, potential changes and plans, and confirmation of understanding.

AT-MIST (Age, Time of incident or onset of symptoms, Mechanism of injury/Medical Complaint, Injuries or Inspections head-to-toe, vital Signs, and Treatments): Describes the cause of injury or medical complaint, findings from head-to-toe inspection, vital signs, and treatments provided.
